An Enterprise of the Navajo Nation

2023 Annual Water Quality Report

Carson-Huerfano

Calendar Year 2023 - Public Water System ID# NN3503063

This report is a snapshot of your water quality. Included are details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The Environmental Protection Agency (EPA) and Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Safe Drinking Water Act...

In 1996, the Safe Drinking Water Act (SDWA) was amended to ensure public water systems provide safe drinking water to the public and meet drinking water quality standards. The United States Environmental Protection Agency (USEPA) is governed to oversee states, localities, and water suppliers who implement these drinking water standards. Pursuant to SDWA, USEPA established maximum contaminant levels, maximum contaminant level goals, action levels, and treatment techniques to protect public health from drinking water contamination. NTUA is also regulated by the Navajo Nation Environmental Protection Agency (NNEPA) and must also comply with Navajo Nation Primary Drinking Water Regulations (NNP-DWR).

NOTE: Drinking water, including bottled water, may reasonably be expected to contain minimal concentrations of some contaminants. The presence of contaminants does not necessarily indicate the drinking water poses a health risk. Information about contaminants and potential health effects can be obtained from the USEPA Safe Drinking Water Hotline (1-800-426-4791) or online at <http://www.epa.gov/safewater>.

Consumer Confidence Report 2023

The Navajo Tribal Utility Authority (NTUA) operates and maintains the public water system within your Community. NTUA has created the Consumer Confidence Report to reassure our dedication and commitment in providing safe and quality potable water to you, our valued customer. Please take a few minutes to view this report and become familiar with your potable water.

The Consumer Confidence Report will provide valuable information about your potable water, such as, the type of water source, recent water quality detections, potential health effects, and governing drinking water standards and regulations. With water being an intricate part of our lifestyle, NTUA will continue to ensure the protection and quality of potable water served to your community.

Your Water Source

NTUA provides potable water from several different sources. The majority of communities receive their potable water from ground water. Ground water is pumped from wells, ranging from several feet to hundreds of feet in depth, and treated to become potable water. Some communities receive their potable water from streams and springs. Stream and spring water is treated, as if it were ground water, to become potable water. However, some communities receive their potable water from surface water, such as, the Animas River, the San Juan River, Farmington Lake, and Lake Powell. Surface water is pre-treated, filtered, and post-treated to become potable water.

General Information

It is important for you, our valued customer, to understand the potential occurrence and presence of contaminants within your potable water. As water flows on or beneath the surface of the earth, it dissolves naturally occurring minerals and pollutants produced from animal and/or human activity. These disturbed minerals and pollutants are called contaminants and could potentially be found in your potable water. Although, these contaminants may not necessarily pose a health risk to you, they may be of a particular risk to individuals with compromised immune systems. These individuals include persons diagnosed with cancer and undergoing chemotherapy, persons who have undergone organ transplants, persons with HIV/AIDS or other immune-deficiency disorders, and elderly and infants who may be prone to infection by these contaminants. These individuals should seek advice from their health care provider about consuming community potable water.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity including:

- microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;
- inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil & gas production, mining, or farming;
- pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and
- radioactive contaminants, which can be naturally-occurring or be the result of oil & gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit

continued from page 1 - "Why are there contaminants in my drinking water?"

the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Where does my water come from? Your water comes from 1 ground water source and 1 surface water source. One surface water source is purchased from Public Water System #NM3501124.

Water Quality Table

The table below lists all of the drinking water contaminants detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires monitoring for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

2023 Water Quality Table from Carson Well – Ground Water Source

| Contaminants | MRDLG | MRDL | Your Water | Range Low | Range High | Sample Date | MRDL Exceeded | Typical Source |
|---|-------|--------------|------------|---------------------------|-------------|---------------|--|--|
| DISINFECTANTS | | | | | | | | |
| Chlorine Units: Chlorine residual, ppm | 4 | 4 | 0.4679 | 0.12 | 1.01 | 2023 | No | Drinking water additive used for disinfection |
| Contaminants | MCLG | MCL | Your Water | Range Low | Range High | Sample Date | Violation | Typical Source |
| DISINFECTION BY-PRODUCTS | | | | | | | | |
| Five Haloacetic Acids (HAA5) Units: ppb | N/A | 60 | 19 | N/A | N/A | 2023 | No | By-product of drinking water chlorination |
| Total Trihalo-methanes (TTHMs) Units: ppb | N/A | 80 | 61.1 | N/A | N/A | 2023 | No | By-product of drinking water chlorination |
| INORGANIC CONTAMINANTS | | | | | | | | |
| Barium Units: ppm | 2 | 2 | 0.019 | N/A | N/A | 2020 | No | Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits |
| Fluoride Units: ppm | 4 | 4 | 0.59 | N/A | N/A | 2020 | No | Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories |
| Nitrate [reported as Nitrogen] Units: ppm | 50 | 50 | 5 | N/A | N/A | 2020 | No | Runoff and leaching from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits |
| Selenium Units: ppb | 50 | 50 | 4 | ND | 4 | 2020 | No | Petroleum, glass, metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; livestock lot runoff |
| Sodium Units: ppm | N/A | N/A | 322 | N/A | N/A | 2020 | No | Erosion of natural deposits; salt water intrusion |
| Contaminants | MCLG | Action Level | Your Water | Range | Sample Date | A.L. Exceeded | Typical Source | |
| LEAD AND COPPER RULE | | | | | | | | |
| Copper Units: ppm - 90th Percentile | 1.3 | 1.3 | 0.055 | 0 sites over Action Level | 2021 | No | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives | |
| Copper Units: ppm - 90th Percentile | 1.3 | 1.3 | 0.276 | 0 sites over Action Level | 2021 | No | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives | |
| Copper Units: ppm - 90th Percentile | 1.3 | 1.3 | 0.22 | 0 sites over Action Level | 2021 | No | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives | |
| Lead Units: ppb - 90th Percentile | 0 | 15 | 1 | 0 sites over Action Level | 2021 | No | Corrosion of household water plumbing systems; discharges from industrial manufactures; erosion of natural deposits. | |
| Lead Units: ppb - 90th Percentile | 0 | 15 | 3 | 0 sites over Action Level | 2021 | No | Corrosion of household water plumbing systems; discharges from industrial manufactures; erosion of natural deposits. | |

Special Education Statements - Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. This public water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at <http://www.epa.gov/your-drinking-water/basic-information-about-lead-drinking-water>.

Microbiological Testing

We are required to test your water regularly for signs of microbial contamination. Positive test results could lead to follow-up investigations called assessments and potentially the issuance of public health advisories. Assessments could lead to required corrective actions. The information below summarizes the results of those tests.

| Calendar Year | Sampling Requirements | Sampling Conducted (months) | Total E. Coli Positive | Assessment Triggers | Assessments Conducted |
|---------------|-----------------------|-----------------------------|------------------------|---------------------|-----------------------|
| 2023 | 2 Samples due monthly | 12 out of 12 | 0 | 0 | 0 |

Table Definitions

| | | | | | |
|-------------|---|--------------|---|----------------------------------|--|
| Term | Definition | Term | Definition | Term | Definition |
| AL | Action Level: The concentration of copper and lead in potable water which determines if treatment requirements are necessary for a public water system. | MCLG | Maximum Contaminant Level Goal: The maximum level of a contaminant in potable water at which no known or anticipated adverse health effect would occur, allowing for an adequate margin of safety. | N/A | Not applicable |
| LRAA | Locational Running Annual Average: the arithmetic average of analytical results for samples taken at a specific monitoring location during the previous four calendar quarters. | MRDL | Maximum Residual Disinfectant Level: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants. | ND | Not detected |
| MCL | Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water which is delivered to any user of a public water system. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. | MRDLG | Maximum Residual Disinfectant Level Goal: The maximum level of a disinfectant in drinking water at which no known or anticipated adverse health effect would occur, allowing for an adequate margin of safety. | ppb | parts per billion: or microgram per liter (ug/L) |
| | | | | positives samples: | the number of positive samples taken that year. |
| | | | | % positive samples/month: | percent of samples taken monthly that were positive. |
| | | | | TT | Treatment Technique: A required physical or chemical treatment process intended to reduce the level of a contaminant in potable water. |
| | | | | 90th Percentile: | Statistical value used to determine if Action Level is exceeded. Determined by calculating the value at which 90% of the samples tested were below that value. |

2023 Water Quality Table – Cutter Water Treatment Plant Surface Water Source

| Contaminants | MCLG or MRDLG | MCL or MRDL | Detect in Your Water | Range Low High | Sample Date | Violation | Typical Source |
|---|---------------|-----------------------------------|--|----------------|-------------|-----------|---|
| DISINFECTIONS & DISINFECTION BY-PRODUCTS | | | | | | | |
| <i>(There is onvincing evidence that addition of a disinfectant is necessary for control of microbiol contaminants)</i> | | | | | | | |
| Chlorine (as Cl ₂) (ppm) | 4 | 4 | 1.48 (avg) | 0.67 2.0 | 2023 | No | Water additive used to control microbes |
| INORGANIC CONTAMINANTS | | | | | | | |
| Barium Units: ppm | 2 | 2 | 0.057 | N/A | 2023 | No | Discharge of oil drilling wastes Discharge from metal refineries; erosion of natural deposits. |
| Fluoride Units: ppm | 4 | 4 | 0.17 | N/A | 2023 | No | Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories |
| Nitrate [reported as Nitrogen] Units: ppm | 10 | 10 | 0.16 | N/A | 2023 | No | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits. |
| RADIOLOGICAL CONTAMINANTS | | | | | | | |
| Radium (combined 226/228 (pCi/L)) | 0 | 5 | 0.39 | N/A | 2021 | No | Erosion of natural deposits |
| Contaminants | MCLG or MRDLG | MCL TT, or MRDL | Detect in Your Water | Range | Sample Date | Violation | Typical Source |
| MICROBIOLOGICAL CONTAMINANTS | | | | | | | |
| Turbidity (NTU) | NA | TT=1 NTU | Highest single Measurement 0.29 NTU | N/A | 2023 | No | Soil runoff |
| | | TT=95% of samples/month ≤ 0.3 NTU | 100% of the samples were below the TT value of 0.3 NTU | | | | |
| Turbidity is a measurement of the cloudiness of the water. We monitor turbidity because it is a good indicator of the effectiveness of our filtration system. | | | | | | | |

How can I get involved?

Please feel free to contact the number provided below for more information.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For more information please contact

Raquel Whitehorse, Supervisor, Navajo Tribal Utility Authority Laboratory, PO Box 170, Fort Defiance, AZ 86504-0170, Phone: (928) 729-6239, Fax: (928) 729-6249.

Conserve Water at Home

- Turn taps off tightly so they do not drip.
- Use a cup instead of running the tap while brushing your teeth or shaving.
- Take shorter showers to reduce water use.
- Check all faucets, pipes, shower-heads and toilets for leaks. repair all leaks if found.
- Wash full loads of dishes and laundry.
